

PigTronic 500

Temptron 500 is a 5 stage and variable fan speed regulator for swine raising.

Temptron 500 can control variable fans up to 10 Amp as minimum ventilation, 2 additional on/off fan groups, 1 heater, 1 cooling system with an on/off timer and alarm for high and low temperatures.

The unit can be connected to the Agro Net system for central management from a central PC.

One temperature sensor and one humidity sensor can be connected to the Temptron. All functions are operated according to preset set points.

The cooling will stop if the measured humidity is higher than the preset humidity set point. Easy to operate and install.
